APPLICATION NOTES

1. LTL Carrier Spec
This EDI 214 Load Status Message implementation guide pertains to Less Than Load (LTL) shipments from LTL carriers. This spec is NOT for Truckload carriers.

2. Functional Acknowledgments.
Please notify CH Robinson if you do not wish to receive 997 functional acknowledgements for the 214's.

3. Errors
CH Robinson will not be responsible for correcting data sent to us. CH Robinson will send 997 functional acknowledgements, indicating the EDI syntax acceptance status of the received 214.

4. Inbound 214 Load Status Events

- Pickup or Delivery Event - Actual Dates and Times applicable to a pickup or delivery location of a shipment.

X3 - Arrived at Pickup Location
AF - Departed Pickup Location
X1 - Arrived at Delivery Location
CD - Departed Delivery Location (delivery complete)

- Check Call Event 'In Transit' - This is the actual date and time of a truck at a specified location en route to a pickup or a delivery. This location will not be a pickup or a delivery location.

X6- En Route to Location

- See code list for additional codes.

5. Timing

- C.H. Robinson would like to recieve In-Transit updates every 15 minutes

- C.H. Robinson needs to receive 214 status updates as close to the actual event as possible. Ideally within 15 minutes of the event.

C.H. Robinson Inbound 214 Structure:

·A 214 load status report to C.H. Robinson should report a status(s) for one and only one location. For example, three 214's would be required to report a status(s) for each stop of a 3-stop load. A single 214 may contain 2 statuses in separate AT7 Loops for the same location. However, C.H. Robinson prefers only one status per 214.

·Maximum of one LX Loop per 214 with a maximum of 2 AT7 loops in the LX.

·CH Robinson needs to receive 214 status updates within one hour of the event occurrence.
